## Feed the Echidna

### Explanation:

This is a translation of a page from *Australia - Lower Primary Themes An Integrated Approach* by R.I.C. Publications, a primary school textbook.

There are maths questions in which students can calculate how many ants they can feed to Australia's unique animal, the echidna, which loves eating ants. Not only can students solve problems whilst having fun, but they can also enjoy activities such as paper cutting and pasting. This worksheet combines several learning elements as students can learn about an Australian animal while working on calculations and cutting/pasting activities.

The textbook introduced here can be purchased from R.I.C. Publications.
